A
Lorenz curve (Gini = 0.879)
Observed
Equality line
Cumulative fraction of false positives
Cumulative fraction of background groups
Permutation null
Count
Gini
G_{obs}
$p < 5 \times 10^{-4}$
Bottom 90% of backgrounds → 20% of FPs
(top 10% → 80%)
B
Rank-ordered FP counts (N = 217, total FPs = 289)
False positives per group
Background groups ranked by FP count
Top 10% = 22 groups
26 groups = 90% of FPs
